AI Product Portfolio

Honors

23 awards in hackathons, design and entrepreneurship

1 utility/design patent · First inventor

iF Design Student Award · Top 300

A' Design Award & Competition

Milan Design Week · China Computing Contest

M.S.

B.S.

EXCHANGE

Honors Program for Research & Innovation

Zhejiang University

Industrial Design Eng.

GPA 3.75 / 4

Jun 2024 - Jun 2027

Fuzhou University

Industrial Design

Rank 2 / 61

Jun 2020 - Jun 2024

KTH Royal Institute of Technology

Exchange Student

AI / Data: GenAI evaluation, Stable Diffusion, NLP, SQL / Python **Product / Design:** PRD, business analysis, competitive research, MVP, QFD, Figma / Axure

EXPERIENCE

Product Manager

Microsoft · PowerPoint Agent

May 2026 - Present

- **Evaluation workflow:** Identified a review bottleneck across 14-case comparison evals with roughly 2,000 characters per analysis. Built an AI-coded analytics MVP in one week; internal tests surfaced **10 leading low-score causes in 15 minutes**.
- **Brand-guide product strategy:** Owned a product direction that converts unstructured brand guides into standards a generation system can apply reliably; led discovery, MVP scoping, demo validation, metric design, and product specifications.
- **Failure diagnosis and iteration:** Used case reviews and bug bashes to turn vague feedback such as 'too AI-like' and 'abnormal imagery' into reproducible issues, then translated patterns into priorities for generation quality, latency, routing, and engineering changes.
- **Test-case architecture:** Decomposed stability risks from missing template data, conflicting rules, and content changes into a three-layer test model covering **12 brand capabilities and 39 element-level cases**, establishing capability boundaries and a regression baseline.

Co-Founder

Acuipire (HK) & Singularity Leap Tech (Hangzhou)

May - Aug 2025

- **Products:** Built 'Otter Home,' a one-minute interior-design and furniture-matching MVP, and 'PiLive,' enabling real-time product recognition and one-click posters for cross-border livestreaming.
- **0-to-1 delivery:** Mapped requirements and workflows with **27 Shenzhen B2B clients**; produced PRDs, SKU/SPU commerce schemas, and demos, and coordinated front-end/back-end delivery.
- **AI engineering system:** Defined prompt frameworks, camera standards, and material-rendering requirements; established a style-template library and furniture-category model library.
- **Commercial and technical trade-offs:** Benchmarked 10+ global APIs for output quality, cost, and control; product-logic changes reduced per-feature image cost by approximately **70%**.
- **Partnerships and recognition:** Backed by Microsoft startup funding and ByteDance's AI platform; co-authored an HCI paper under review with the PolyU-NVIDIA Joint Lab; won 'Most Investable Project' at Liangcang.

Product Manager

iFLYTEK · B2B AI Healthcare

Dec 2023 - Feb 2024

- **Multi-stakeholder delivery:** Integrated with hospital HIS and contributed to CDSS, VTE, and medical-record quality-control projects; adapted UI logic for hospital and provincial-government workflows and coordinated engineering upgrades.
- **Positioning and launch validation:** Benchmarked competitors to define differentiation, feature boundaries, and roadmaps; authored VTE/CDSS manuals, deployed simulated HIS environments, and used Excel/SQL for testing and field processing.

Product Manager

Hello Inc. · Hardware Products

Mar - Aug 2024

- **User insight and metrics:** Synthesized **400+** user, operations, and engineering inputs into comparable product metrics; built a Hello/Qingju/Meituan benchmark and linked assembly, CMF, and ergonomic data to seat-angle and firmness improvements for the next-generation Hello Cloud Bike.
- **Innovation projects and MVP:** Supported storage-footrest initiation, user research, and PRD development; validated concepts through MVP A/B tests. Summer initiatives lifted bike turnover by **2 pp** and e-bike turnover by **1.8 pp**.

RESEARCH

3 EI papers & ICDF delegate

2 national innovation projects

Government Hanfu AI Virtual Try-on

7+ student leadership roles

NTU Artificial Intelligence Programme

KTH Industrial Production & Mgmt. Exchange

- Huddinge Municipality research report; Armada host team; KTH Global Chinese exchange representative; project member, Swedish Chinese Students Association.
- Yangtze River Delta Hanfu AI virtual try-on: built three image-generation workflows and optimized two, cutting generation time **20%** and reducing poor outputs **28%**.
- Business valuation and AI bootcamp: applied R, Python, and Heroku to corporate credit scoring and linear regression; completed the program as the sole top-performing team.
- Led a smart municipal-waste classification project; introduced a 'carbon account' workstream and used SPSS clustering/stratification to link attitudes with behavior and support a carbon database.
