Rank 2 / 61

2024-Jun 2027
2020-Jun 2024

AI / Data: GenAI Eval, Stable Diffusion, NLP, SQL / Python **Product / Design:** PRD, business analysis, competitive analysis, MVP, QFD, Figma / Axure

EXPERIENCE

Product Manager Intern Microsoft · PowerPoint AI

May 2026-Present

- **Scope:** Improved quality iteration for AI-generated decks across eval tooling, failure diagnosis, and brand-template testing.
- **Eval efficiency:** Found that each pairwise Eval required manual review of 14 cases with ≈2K characters of analysis each, obscuring recurring failures. Validated the need and built an analysis-tool MVP with AI coding in ≈1 week; internal tests surfaced **10 major low-score drivers in 15 min**.
- **Problem framing & strategy:** Turned vague feedback such as “AI-looking” and “abnormal imagery” into reproducible cases; translated patterns into product decisions on quality, latency, and pipeline selection, then worked with engineering on changes.

Co-Founder Acuispire (HK) & Singularity Leap Tech (Hangzhou)

May-Aug 2025

- **Products:** Built “Otter Home,” a 1-min interior-design and furniture-matching MVP, and “PiLive,” with real-time product recognition and one-click posters for cross-border livestreaming.
- **0-1 delivery:** Co-defined workflows with **27 Shenzhen B2B clients**; wrote PRDs, designed SKU/SPU commerce schemas and demos, and coordinated FE/BE development.
- **Commercial & technical trade-offs:** Benchmarked 10+ global APIs on output quality, cost, and controllability; product-logic changes cut per-feature image cost by **≈70%**.
- **Partnerships & recognition:** Supported by Microsoft startup funding and ByteDance's AI platform; co-authored an HCI paper under review with the PolyU-NVIDIA Joint Lab; won “Most Investable Project” at Liangcang.

Product Manager Intern Hello Inc. · Hardware Products

Mar-Aug 2024

- **Hardware evaluation system:** Synthesized **400+** user, ops, and engineering inputs; used QFD to translate experience issues into durability, maintenance-efficiency, and ergonomic metrics, supporting refurbishment improvements and quarterly team goals.
- **Innovation projects & MVP:** Worked on night-time QR scanning, storage-footrest, and summer-accessory concepts; owned requirement analysis, solution definition, PRDs, and demo validation. MVP A/B tests lifted bike turnover by **2 pp** and e-bike turnover by **1.8 pp**.
- **Competitive and product strategy:** Built a Hello/Qingju/Meituan bike and e-bike benchmark, comparing assembly, CMF, ergonomics, and iteration paths to support hardware selection and project approval.

Product Manager Intern iFLYTEK · B2B AI Healthcare

Dec 2023-Feb 2024

- **Multi-stakeholder delivery:** Integrated with hospital HIS and worked across CDSS, VTE, and medical-record QC; adapted UI logic for hospital and provincial-government workflows and coordinated engineering updates.
- **Positioning & validation:** Benchmarked competitors to define differentiation, scope, and feature lists; authored VTE/CDSS manuals, deployed simulated HIS environments, and used Excel/SQL for testing and field processing.

RESEARCH

3 EI Papers & ICDF Delegate
2 National Innovation Projects

Government Hanfu AI Try-on
7+ Student Leadership Roles

NTU AI Programme
KTH Industrial Production & Mgmt. Exchange

- Huddinge Municipality research report; Armada Host Team; KTH Global Chinese exchange representative; project member, Swedish Chinese Students Association.
- Yangtze River Delta Hanfu AI Try-on: built 3 image-generation workflows and optimized 2, reducing generation time **20%** and bad cases **28%**.
- Business Valuation & AI Bootcamp: applied R, Python, and Heroku to corporate credit rating and linear regression; sole “Excellent” team.
- Smart municipal waste classification: led a “carbon account” subproject; used SPSS cluster/stratified analysis to link attitudes with behavior and support a carbon database.
